

WS – Welding Connectors

General Ratings

- Voltage 50 VAC Max
- Amperage 325A Continuous **500A Intermittent**
 - Notes: The chart to the right is a guideline for wiring sizes based on duty cycles.

WS devices allow users to make fast and reliable connections of welding cables. Their spring-loaded silver contacts provide connections that are unaffected by cable movement or vibration and operate with a self-cleaning wiping action that ensures a reliable electrical connection every time.

Wiring Hole		Maximum Amperage Cycle (5 min Cycle)			
in²		30% Duty	60% Duty	100% Duty	
.025	16	150A	100A	75A

LC

LC – Battery Connectors

The periodic charging of batteries for many applications (including electric boats and material handling vehicles) requires frequent connector operations. In order to avoid current interrupting on the charging contacts, a pilot contact is generally used. The pilot contact is designed to break before the main contacts, thereby signalling the circuit breaker to function.

Meltric's LC battery connectors, are made with spring-loaded, silver-nickel butt style contacts, which are operated by means of a lever. This design ensures a superior electrical connection and the quick and easy operation of the device. The lever also provides a means of locking the units together to help prevent accidental disengagement. By contrast, many competitive battery charger connectors use sliding contacts. Because of how they operate, sliding contacts cannot provide the electrical performance, the durability or the quick breaking capabilities of Meltric's lever operated and spring-loaded, silver-nickel butt contacts.

General Ratings

- Voltage 50 to 750 VDC Max 50 to 690 VAC Max
- Current Interruption Capability Not for current interrupting
- Amperage 75A - 200A
- Pilot Circuit 50V Max
- Cable Termination Crimp/Solder
- Contact Pressure 19.8 lbs Min. 22.0 lbs Max
- Contact Voltage Drop 3.0 mV
